## Abstract

The Online Exam Management System is a web-based application designed to conduct and manage examinations online. The system allows administrators to create exams, add questions, manage users, and view examination results. Students can register or log in, attend exams, submit answers, and view their results. The system automatically evaluates objective-type questions and reduces manual work and errors in the examination process. It provides a simple, secure, and efficient way to conduct examinations and manage student performance. The main objective of this system is to make the examination process faster, easier, and more convenient for both administrators and students.
